# Package 'texPreview'

October 29, 2019

```
Type Package
Title Compile and Preview Snippets of 'LaTeX' in 'RStudio'
Version 1.4.1
Date 2019-10-27
Maintainer Jonathan Sidi <yonis@metrumrg.com>
Description Compile and preview snippets of 'LaTeX'. Can be
      used directly from the R console, from 'RStudio', in Shiny apps and R
     Markdown documents. Must have 'pdflatex' or 'xelatex' or 'lualatex' in
     'PATH'.

as.kable

Try to coerce an object into a knitr\_kable object

# Description

coerce objects into a knitr\_kable class object with a latex format

# Usage

```
as.kable(x)
```

# Arguments

x object

#### Value

an object of class knitr\_kable

```
tex <- '\\begin{tabular}{llr}
\\hline
\\multicolumn{2}{c}{Item} \\\\
\\cline{1-2}
Animal & Description & Price (\$) \\\\\hline
Gnat & per gram & 13.65 \\\\</pre>
```

buildUsepackage 3

```
& each
                & 0.01
                             1111
Gnu & stuffed & 92.50
Emu & stuffed & 33.33
Armadillo & frozen & 8.99
                                           ////
                                           1111
                                           1111
\\hline
\\end{tabular}'
ktex <- as.kable(tex)</pre>

```

buildUsepackage

Build usepackage command for TeX document Deprecated

#### **Description**

This function has been deprecated, use build\_usepackage instead.

# Usage

```
buildUsepackage(pkg, options = NULL, uselibrary = NULL,
    chk.inst = FALSE)
```

4 build\_usepackage

#### **Arguments**

pkg character, name of TeX package

options character, name(s) of options to use in the package

uselibrary character, part of document preamble to specify a uselibrary call related to pack-

age

chk.inst logical, invokes a check to see if pkg is currently installed on system (default

FALSE)

#### **Description**

input TeX package name and optional package functions to create usepackage call

#### **Usage**

```
build_usepackage(pkg, options = NULL, uselibrary = NULL,
    chk.inst = FALSE)
```

# **Arguments**

pkg character, name of TeX package

options character, name(s) of options to use in the package

uselibrary character, part of document preamble to specify a uselibrary call related to pack-

age

chk.inst logical, invokes a check to see if pkg is currently installed on system (default

FALSE)

#### **Details**

if options and uselibrary are NULL (default) then only the call for the package is returned. See the TeX wikibook for more information <a href="https://en.wikibooks.org/wiki/LaTeX/Document\_Structure#Packages">https://en.wikibooks.org/wiki/LaTeX/Document\_Structure#Packages</a> on the usepackage command. If chk.inst finds that the package is not installed on system function returns NULL.

#### Value

character

```
build_usepackage(pkg = 'xcolor')
build_usepackage(pkg = 'xcolor',options = 'usenames')
#build many at once using mapply
geom.opts=c('paperwidth=35cm','paperheight=35cm','left=2.5cm','top=2.5cm')
use.opts="\\usetikzlibrary{mindmap,backgrounds}"
```

getTexPackages 5

```
unlist(mapply(build_usepackage,
pkg = list('times','geometry','tikz'),
options= list(NULL ,geom.opts ,NULL),
uselibrary = list(NULL ,NULL ,use.opts)
))
```

getTexPackages

Get list of TeX packages installed on System Deprecated

# Description

This function has been deprecated, use get\_texpackages instead.

# Usage

```
getTexPackages()
```

get\_texpackages

Get list of TeX packages installed on System

# Description

Fetch all TeX packages currently installed on system

# Usage

```
get_texpackages()
```

# **Details**

If OS is Windows function checks against MikTex else function checks against TexLive.

#### Value

character

```
## Not run: head(get_texpackages())
```

6 texPreview

texPreview	Render and Preview snippets of TeX in R Viewer Deprecated
------------	---

#### **Description**

This function has been deprecated, use tex\_preview instead.

## Usage

```
texPreview(obj, tex_lines = NULL, stem = "tex_temp",
 overwrite = TRUE, keep_pdf = FALSE, tex_message = FALSE,
 fileDir = tex_opts$get("fileDir"), margin = tex_opts$get("margin"),
 imgFormat = tex_opts$get("imgFormat"),
 returnType = tex_opts$get("returnType"),
 resizebox = tex_opts$get("resizebox"),
 usrPackages = tex_opts$get("usrPackages"),
 engine = tex_opts$get("engine"), cleanup = tex_opts$get("cleanup"),
 density = tex_opts$get("density"), svg_max = tex_opts$get("svg_max"),
 print.xtable.opts = tex_opts$get("print.xtable.opts"),
 opts.html = tex_opts$get("opts.html"), markers = interactive(), ...)
```

Default: tex\_opts\$get('engine')

#### Argu

cleanup

guments	
obj	object to convert to TeX script
tex_lines	vector of character, in case of special needs, instead of asking texPreview to build up, you may choose to pass in the contents of the complete LaTeX file directly. It should be a vector of character with each element as a line of raw TeX code.
stem	character, name to use in output files, Default: "tex_temp"
overwrite	logical, controls if overwriting of output stem* files given their existences, Default: TRUE
keep_pdf	logical, controls if the rendered pdf file should be kept or deleted, Default: FALSE
tex_message	logical, controls if latex executing messages are displayed in console. Default: FALSE
fileDir	character, output destination. If NULL a temp.dir() will be used and no output will be saved, Default: tex_opts\$get('fileDir')
margin	table margin for pdflatex call, Default: tex_opts\$get('margin')
imgFormat	$character, defines the type of image the PDF is converted to Default: tex\_opts\$get('imgFormat')\\$
returnType	character, one of "viewer", "html", or "tex" determining appropriate return type for the rendering process, Default: tex_opts\$get('returnType')
resizebox	logical, forces a tabular tex object to be constrained on the margins of the document, Default: tex_opts\$get('resizebox')
usrPackages	character, vector of usepackage commands, see details for string format
engine	character, specifies which latex to pdf engine to use ('pdflatex', 'xelatex', 'lualatex'),

character, vector of file extensions to clean up after building pdf, Default: tex\_opts\$get('cleanup')

tex\_opts 7

density

numeric, controls the density of the image. Default is 150: tex\_opts\$get('density)

svg\_max

numeric, maximum svg file size allowable to preview, Default: tex\_opts\$get('svg\_max')

print.xtable.opts

list, contains arguments to pass to print.table, relevant only if xtable is used as the input, Default: tex\_opts\$get('print.xtable.opts')

opts.html

list, html options, Default: tex\_opts\$get('opts.html')

markers

logical, if TRUE then RStudio markers will be invoked to create links for the log file on rendering errors, Default: interactive()

... passed to system2

## Description

Options for functions in the texPreview package. When running R code, the object tex\_opts (default options) is not modified by chunk headers (local chunk options are merged with default options), whereas tex\_opts\_current (current options) changes with different chunk headers and it always reflects the options for the current chunk.

## Usage

```
tex_opts
tex_opts_current
```

#### Format

An object of class list of length 5.

#### **Details**

Normally we set up the global options once in the first code chunk in a document using tex\_opts\$set(), so that all *latter* chunks will use these options. Note the global options set in one chunk will not affect the options in this chunk itself, and that is why we often need to set global options in a separate chunk.

Below is a list of default chunk options, retrieved via tex\_opts\$get():

These options correspond to fields in the direct call to tex\_preview, which are listed in explained in the help manual.

#### Note

tex\_opts\_current is read-only in the sense that it does nothing if you call tex\_opts\_current\$set(); you can only query the options via tex\_opts\_current\$get().

```
tex_opts$get()
```

8 tex\_preview

tex_preview Render and Preview snippets of TeX in R Viewer	tex_preview	Render and Preview snippets of TeX in R Viewer
--	-------------	--

# Description

input TeX script into the function and it renders a pdf and converts it an image which is sent to Viewer.

# Usage

```
tex_preview(obj, tex_lines = NULL, stem = "tex_temp",
  overwrite = TRUE, keep_pdf = FALSE, tex_message = FALSE,
  fileDir = tex_opts$get("fileDir"), margin = tex_opts$get("margin"),
  imgFormat = tex_opts$get("imgFormat"),
  returnType = tex_opts$get("returnType"),
  resizebox = tex_opts$get("resizebox"),
  usrPackages = tex_opts$get("usrPackages"),
  engine = tex_opts$get("engine"), cleanup = tex_opts$get("cleanup"),
  density = tex_opts$get("density"), svg_max = tex_opts$get("svg_max"),
  print.xtable.opts = tex_opts$get("print.xtable.opts"),
  opts.html = tex_opts$get("opts.html"), markers = interactive(), ...)
```

#### **Arguments**

obj	object to convert to TeX script
tex_lines	vector of character, in case of special needs, instead of asking texPreview to build up, you may choose to pass in the contents of the complete LaTeX file directly. It should be a vector of character with each element as a line of raw TeX code.
stem	character, name to use in output files, Default: "tex_temp"
overwrite	logical, controls if overwriting of output stem* files given their existences, Default: TRUE
keep_pdf	logical, controls if the rendered pdf file should be kept or deleted, Default: FALSE
tex_message	logical, controls if latex executing messages are displayed in console. Default: FALSE
fileDir	character, output destination. If NULL a temp.dir() will be used and no output will be saved, Default: tex_opts\$get('fileDir')
margin	table margin for pdflatex call, Default: tex_opts\$get('margin')
imgFormat	character, defines the type of image the PDF is converted to Default: tex_opts\$get('imgFormat')
returnType	character, one of "viewer", "html", or "tex" determining appropriate return type for the rendering process, Default: tex_opts\$get('returnType')
resizebox	logical, forces a tabular tex object to be constrained on the margins of the document, Default: tex_opts\$get('resizebox')
usrPackages	character, vector of usepackage commands, see details for string format
engine	character, specifies which latex to pdf engine to use ('pdflatex', 'xelatex', 'lualatex'), Default: tex_opts\$get('engine')

9 tex\_preview

cleanup	character, vector of file extensions to clean up after building pdf, Default: tex_opts\$get('cleanup')
density	numeric, controls the density of the image. Default is 150: tex_opts\$get('density)
svg_max	numeric, maximum svg file size allowable to preview, Default: tex_opts\$get('svg_max')
print.xtable.o	pts
	list, contains arguments to pass to print.table, relevant only if xtable is used as the input, Default: tex_opts\$get('print.xtable.opts')
opts.html	list, html options, Default: tex_opts\$get('opts.html')
markers	logical, if TRUE then RStudio markers will be invoked to create links for the log file on rendering errors, Default: interactive()
	passed to system2

#### **Details**

tex\_preview is an S3 method that can be used to preview TeX output from different object classes.

Built-in support includes:

- character (tex lines)
- knitr\_kable (kable/kableExtra)
- xtable
- texreg
- · equatiomatic

The function assumes the system has pdflatex installed and it is defined in the PATH.

To add packages to the tex file on render there are two options

- Use build\_usepackage and use the input argument usrPackages.
- Append to the input object \usepackage{...} calls, they will be parsed and added the to rendering.
- An image file of the name stem with the extension specified in imgFormat.
- The default extension is png.
- The function writes two files to disk in the fileDir
  - Image file
  - TeX script
- The rendering files are removed up from the fileDir. This can be controlled using the cleanup argument or tex\_opts\$get('cleanup')

#### Value

The output of the function is dependent on the value of returnType:

- · viewer: NULL
  - magick image is printed in the internal viewer
- tex:
  - character, TeX lines
  - printed 'asis' in RMarkdown
- input: character

10

- path to the file containing the tex wrapped in an input call
- printed 'asis' in RMarkdown
- html: magick image
  - Printed as an HTML document in the internal viewer
  - Printed as an image in RMarkdown

#### **Examples**

```
data('iris')
if(interactive()){
# Raw TeX
tex <- '\begin{tabular}{llr}</pre>
\\hline
\\cline{1-2}
         & Description & Price (\$) \\\
Animal
\\hline
                       & 13.65
Gnat
         & per gram
                                   \\\\
& each
             & 0.01
                         1111
         & stuffed
                       & 92.50
                                   1111
Gnu
         & stuffed
                    & 33.33
                                    ////
Armadillo & frozen
                      & 8.99
                                    1111
\\hline
\\end{tabular}'
# knitr kable
mtcars%>%
  head()%>%
  knitr::kable("latex")%>%
  tex_preview()
# with svg output pan/zoom is enabled in the internal viewer
tex_preview(obj = tex,stem = 'eq',imgFormat = 'svg')
# use tex_lines parameter to pass full document
tikz_path <- system.file(</pre>
                 'examples/tikz/credit_rationing.tex',
                 package = 'texPreview'
                 )
tex_preview(tex_lines = readLines(tikz_path))
}
```
